

Batteries deteriorate naturally over time. Following the directions below will minimize this occurrence and assist the battery in meeting its potential.

## USE

Charge fully prior to each use!

## LONG-TERM STORAGE

If you do not use your Therm-ic Liionpacks for an extended period of time (e.g. during the summer months), follow the instructions below:

1. Before storing the batteries discharge the batteries and charge them halfway again (charge for approx. 1h) - DON'T FULLY CHARGE
2. Turn off Liionpacks and disconnect them from the charger or heated insole
3. Store in a cool, dry environment at 5°C/41°F to 20°C/68°F
4. Avoid longer periods of non-use. If the storage exceeds a longer period, repeat the procedure of discharging the batteries and charging them halfway again every 6 months.

The proper storage of your battery will help to maximise its life and strength.

*For more information, please read the operating instructions!*
